

Algorithm Performance

Tasks by step

Task 1:

Create a random number generator that can create strings of random numbers in size n.

Task 2:

Print each array

Task 3:

Implement Merge sort

- Print og array before sort

- Print sorted array second

- Confirm the sort is correct

Task 4 :

Implement Quick Sort

- Print og array before sort

- Print sorted array second

- Confirm the sort is correct

Task 5 :

Implement Heap Sort

- Print og array before sort

- Print sorted array second

- Confirm the sort is correct

Task 6 :

Implement Shaker Sort

- Print og array before sort

- Print sorted array second

- Confirm the sort is correct

Task 7:

Learn how to count comparisons in sorting process, add to each sorting algo

Task 8:

Complete driver where each array is being sorted, information is displayed as project requires

Task 9:

Results table per project detail
